Motivation Letter

Dear Members of the Selection Committee,

I am currently a fourth-year Engineering student in Computer Science at ENSEIRB-MATMECA (Bordeaux INP), and I am applying for an Erasmus+ exchange at the Universidad Politécnica de Madrid during the second semester of my academic year.

The Universidad Politécnica de Madrid is my preferred destination because of its outstanding reputation in engineering and computer science. The courses offered fit remarkably well with both my academic curriculum and my personal interests, particularly in software architecture, embedded systems, optimization algorithms, mobile application development and digital signal processing.

My objective is to strengthen my software engineering skills while deepening my understanding of the interaction between hardware and software. Beyond the academic perspective, I am willing to discover a different teaching environment, collaborate with students from diverse backgrounds, and gain the experience of studying in an international setting.

Since all the courses I selected are taught in English, I will be able to fully benefit from the programme while continuing to improve my technical and oral communication skills. I am comfortable working with English documentation and following lectures in English.

This mobility naturally complements my curriculum at ENSEIRB-MATMECA. The knowledge and experience gained at UPM will contribute directly to my engineering education before I complete my compulsory internship in France.

Studying at the Universidad Politécnica de Madrid would represent an important step in my academic and personal development. I am highly motivated to contribute to your university community and make the most of this opportunity.

Yours sincerely,

Raphaël Jontef
